(54) Title: METHOD OF MEMBERSHIP PROTECTION USING MOBILE COMMUNICATION DEVICE

(57) Abstract: The present invention relates to a member protection method using a mobile communication terminal, and in particular to a member protection method using a mobile communication terminal which is capable of quickly coping with an emergency situation in such a manner that when a certain situation, for example, a member with a mobile communication terminal having a positioning function rides on a taxi or in a strange building, and moving information such as an engaged time when the situation is ended and a taxi registered number is registered in a central control server, a member's position is recognized and temporarily stored, and in the case that a movement lifting notice is not received from a member until an engaged time, a certain moving information such as a member's position is transmitted to a mobile communication terminal of a security staff.
